

An analytical, full stack web developer seeking a challenging position that fosters innovation and creativity

Projects

- Currently in the early stages of collaborating on a beginner's guide to web development that explains key concepts of HTML, CSS, and JavaScript (including React). The client side is being built from scratch with React, and bootstrap cards will likely be used to create a UI resembling flashcards. I have personally put together a team that includes a UX and a UI designer, along with other developers. A minimum viable product is expected by 9/22, at the latest.
- A real-time chat app built using React Native. Provided storage and offline capabilities using Google Firestore and a clean UI using the Gifted Chat package.
- A REST API for movie lovers to keep track of their favorite films. Developed using React, Node.js, and a MongoDB Atlas database. User authentication was implemented with JWT, and CORs was used to provide security.
- A Todo app built with Vue, Material Design and Draggable that boasts a modern UI. Users are able to add, remove, and prioritize todo tasks with a simple, yet effective interface.
- A Meetup PWA built using React. The data visualizations display upcoming events and registration availability. Created client side with the Moment library, Recharts, and Axios.

Experience

DINING ROOM MANAGER

The Surf Club Inc - Wilmington, NC
July 2015 - May 2019

- Managed food and beverage operations for main clubhouse at an exclusive, private club.

KEY MANAGER, LINE COOK, SERVER
